

Working Scientifically - Progression through KS1 and KS2 (from NC - with statutory statements in Bold)

Key Stage 1	Lower Key Stage 2	Upper Key Stage 2
I can explore the world around me and raise my own simple questions.	I can raise my own relevant questions about the world around me.	I can use my science experiences to explore ideas and raise different kinds of questions.
I can experience different types of science enquiries, including practical activities.	I can be given a range of scientific experiences and use different types of science enquiries to answer questions.	I can talk about how scientific ideas have developed over time
I can ask simple questions and begin to recognise different ways in which I might answer scientific questions.	I can start to make my own decisions about the most appropriate type of scientific enquiry I might use to answer questions.	I can select and plan the most appropriate type of scientific enquiry to use to answer scientific questions.
I can carry out simple tests.	I can set up simple practical enquiries, comparative and fair tests. I can recognise when a simple fair test is necessary and help to decide how to set it up.	I can recognise when and how to set up comparative and fair tests and explain which variables need to be controlled and why.
I can use simple features to compare objects, materials and living things and, with help, decide how to sort and group them (identifying and classifying) .	I can talk about criteria for grouping, sorting and classifying; and use simple keys.	I can use and develop keys and other information records to identify, classify and describe living things and materials, and identify patterns that might be found in the natural environment.
I can ask people questions and use simple secondary sources to find answers.	I can recognise when and how secondary sources might help me to answer questions that cannot be answered through practical investigations.	I can recognise which secondary sources will be most useful to research my ideas and begin to separate opinion from fact
I can observe closely, using simple equipment I can, with help, observe changes over time.	I can make systematic and careful observations I can help to make decisions about what observations to make, how long to make them for and the type of simple equipment might be used.	I can make my own decisions about what observations to make, what measurements to use, how long to make them for and whether to repeat them.
I can, with guidance, begin to notice patterns and relationships.	I can begin to look for naturally occurring patterns and relationships and decide what data to collect to identify them.	I can look for different causal relationships in data and identify evidence that refutes or supports my own ideas.
I can use simple measurements and equipment (e.g. hand lenses, egg timers) to gather data.	I can take accurate measurements using standard units and learn how to use a range of (new) equipment, such as data loggers / thermometers appropriately.	I can choose the most appropriate equipment to make measurements with increasing precision and explain how to use it accurately. I can take repeat measurements where appropriate.
I can record simple data.	I can collect and record data from my observations and measurements in a variety of ways: notes, bar charts and tables, standard units, drawings, labelled diagrams, keys and make decisions about how to record and analyse my data.	I can decide how to record data and results of increasing complexity from a choice of familiar approaches: scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs.
I can use my observations and ideas to suggest answers to questions. I can talk about what I have found out and how I found it out.	I can, with help, look for changes, patterns, similarities and differences in my data in order to draw simple conclusions and answer questions using scientific evidence.	I can identify scientific evidence that has been used to support or refute ideas or arguments.
I can, with help, record and communicate findings in a range of ways and begin to use simple scientific language.	I can use relevant scientific language to discuss ideas and communicate findings in ways that are appropriate for different audiences, including using oral and written explanations, displays or presentations of results and conclusions.	I can use relevant scientific language and illustrations to discuss, communicate and justify scientific ideas, use oral and written forms such as displays and other presentations to report my findings, conclusions, causal relationships and explanations of degree of trust in results. I can talk about how scientific ideas have developed over time.
	I can, with support, raise new questions from the data, make predictions for new values within or beyond the data and suggest improvements to what I have already done.	I can use my results to make predictions and identify when further observations, comparative and fair tests might be needed.
